## Low Water Pressure?

***Introducing a Constant  
Water Pressure System***

www.nowater.com

## Experience This

### Are you experiencing low water pressure?

Are you on a well or on city water? At Monticello Pump Service, Inc. we have something just for you; it is called a constant water pressure system.

The SQE well pump has a variable speed motor which means it will work on supply and demand, the more water you need or want, the faster the SQE well pump will pump to keep up with the demand.

This gives you Constant Water Pressure throughout your entire house and the outside irrigation system. You will never experience low water pressure again.

## Together!

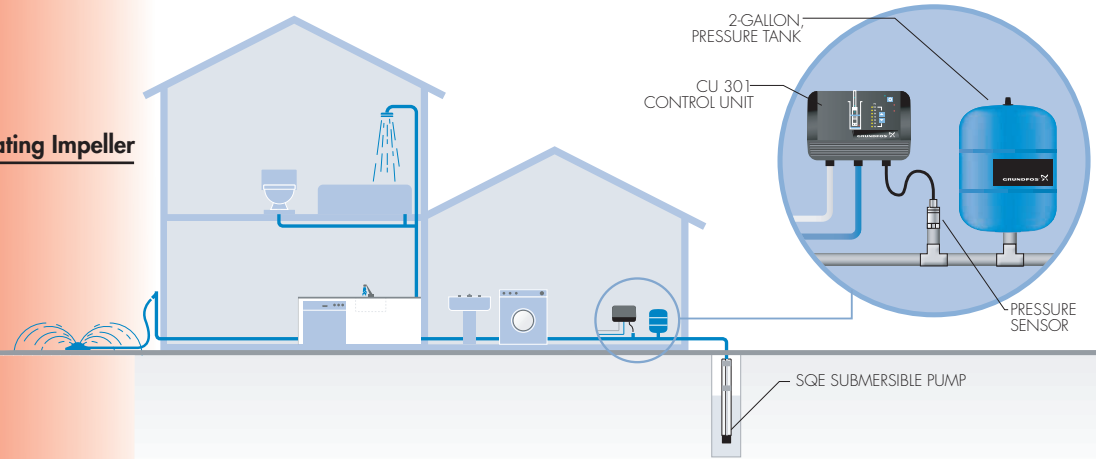

Reliable Check Valve

Floating Impeller

Motor

Your Protection

### The SmartFlo™ SQE Constant Pressure System maintains constant pressure regardless of water consumption.

### Benefits of Having a SQE Constant Water Pressure System...

**OVER LOAD PROTECTION** that will protect the motor against unstable voltage supply by reducing or stopping the pump.

**HIGH STARTING TORQUE** at a low voltage will still cause the SQE well pump to deliver a reliable water supply

**DRY RUNNING PROTECTION** will stop and prevent the pump from damaging itself in case of running dry.

**AUTOMATIC RE-START** when your well recuperates water supply.

**SOFT START** will prevent water pipes from hammering and will cause less stress on the motor of the well pump.
